

Pre Sales PRD

Product Requirements Document: Pre-Sales Automation System

1. Introduction

The current pre-sales process relies on multiple, disconnected Google Forms and Sheets, leading to scattered data, manual overhead, and delays in lead follow-up. This document outlines the requirements for a unified system to consolidate lead management and streamline the initial sales workflow.

2. Goals

- **Consolidate:** Create a single master database for all incoming pre-sales leads.
- **Automate:** Automate initial lead notifications and data synchronization with FreshSales.
- **Streamline:** Provide a centralized dashboard for the sales team to view, manage, and track leads efficiently.

3. User Roles & Permissions

- There will be a single user role with universal access. All users can view and filter all leads within the system.

4. Features & Functionality

- **4.1. Unified Lead Capture**
 - The system will capture leads from all existing Google Forms.
 - Each lead entry must contain the following fields:
 - Child Name
 - Parent Name
 - Parent Email ID
 - Parent Mobile Number
 - Interest Level
 - The system will automatically add a **Source Tag** (to identify the form) and a **Timestamp** to every new lead.
- **4.2. Master Lead Dashboard**
 - A central dashboard will display all leads from the master database.
 - Users must be able to filter leads by various fields (e.g., source, date, interest level).
- **4.3. Automated Notifications**
 - Upon a new lead submission, an automated notification (Email or Slack) will be sent instantly to Eklavya, Ashish, and gifted@genwise.in.
- **4.4. Lead Management & Tracking**
 - **Lead Assignment:**

- If the lead is already present in **FreshSales CRM** and has a Parent Owner tagged (via Student Name or Parent Email), the system should **auto-populate the Parent Owner field and other fields** accordingly.
- If no Parent/Student is not found in CRM, the **Admin will assign the Parent Owner manually** within the system.
- **Status Tracking:** The system will allow the sales owner to track the lead's progress through the defined manual follow-up stages as follows
 - **New Parent** – Lead data does not exist in CRM.
 - **Existing Parent** – Lead data already exists in CRM.
 - **First Call Pending** – Awaiting initial contact.
 - **Warm** – After first call, if the parent shows interest but has many more questions. Lead is then synced to CRM with **Warm Parent** status.
 - **Hot** – After first call, if the parent shows High level of interest. Lead is then synced to CRM with **Hot Parent** status.
 - **Not Interested** – After first call, if the parent declines. Lead is still synced to CRM with **Not Interested** status.
- **Notes**
 - A dedicated **Notes column** must be available at each lead stage.
 - The Parent Owner can enter key call updates or context.
 - On syncing with FreshSales, the **first note entered will be created as a CRM Note** under the parent's record.
- **4.5. FreshSales Integration**
 - Sales owners will add their call notes and updates directly into the new system.
 - These notes will be automatically synced one-way to the corresponding lead's record in FreshSales.

5. Out of Scope

- Automated lead assignment (e.g., round-robin).
- Automated triggering of follow-up messages (WhatsApp/SMS). The system will only track the status of these manual actions.
